

## Shipping Dimensions

Find the shipping size of your transformer in the charts in this section. You will need to know the enclosure size of the transformer. Shipping weights vary per model and can be found in the Quote Tool Specification Sheets. Not all weights are available for unique items.

### **Shipping details**

Small units are carefully packed within sturdy cardboard boxes. For quantity orders, smaller units may be packaged several items per box. The size of the shipment may not be equal to the sum of provided box sizes listed.

NOTE: Smaller units frequently have unequal weight distribution in packed boxes creating a tipping hazard when handling the item. Pick up slowly to avoid dropping.

Larger units are well protected and attached to wood pallets. It is recommended that these units be moved with a forklift. Units are bolted to the pallets. Use proper tools to remove hardware.

In all cases, prepare for a heavy unit. Have appropriate staff and materials on hand to move units safely. Inspect unit before signing for receipt and report any damage to the carrier before accepting.

If a unit is to be returned, original shipping materials should be used if possible, or similar packing method should be utilized for safe transit.

Information provided here is to the best of our knowledge at the time of publishing. Some variation is to be expected.
