**January 2019**

**SUBJECT:** PCB's in transformer production

PCB's are not used by Jefferson Electric in the manufacturing of any transformers.

The use of PCB's (polychlorinated biphenyls) in manufacturing has not been allowed since January 1, 1978.

We can confirm that all products made by Jefferson Electric since January 1, 1978 have not used PCB's.

We do not have records documenting the use of PCB's in products made prior to 1978 but they were not common in the production of dry-type transformers.

Sincerely,

A handwritten signature in black ink, appearing to read "Eric Jaeger", with a long horizontal flourish extending to the right.

Eric Jaeger  
Director of Product Development  
Jefferson Electric
